InfoSec Support and Staff Augmentation Services

In today's evolving economy and threat landscape, assistance from information security specialists can both propel your company forward and help carry the workload along the way. Tevora is that information security specialist. Tevora can provide trusted security consultants with flexible infosec support hours, expansive security expertise across all business areas, and industry leading solutions and practices to help you meet your company's goals. ▲

Information Security with A Flexible Approach

InfoSec Support and Staff Augmentation Services is a flexible approach to strengthen your company's security and IT teams in order to meet both business and security demands. Tevora understands each company's organizational structure and support need is unique. With the capability for both onsite and remote working environments, full-time and part-time support, and a knowledgeable and experienced team, Tevora can adapt to fill those gaps.

Your Trusted Partner

When Tevora partners with your company, the entire breadth and experience of Tevora's team will be behind each project. This could include a Tevora Project Manager who can manage the project budget, build out and monitor ongoing project plans, and coordinate dispersed resources. In addition, during each given project, Security Practice Leads will provide advice and guidance to technical support staff. These additional benefits differentiate Tevora in the InfoSec Support industry and efficiently help your company facilitate InfoSec operations to better protect your client and business data.

Compliance Support

Tevora understands industry and government security regulations and can help you prepare and successfully complete an assessment. Tevora's Compliance Consultants have first-hand experience to:

• Coordinate assessment interviews with subject matter experts;

• Facilitate assessment interview follow-ups and evidence collection; and,

• Relieve employees of compliance work that pulls them away from daily responsibilities.

Compliance Support

Tevora understands industry and government security regulations and can help you prepare and successfully complete an assessment.

Virtual CISO

Tevora's top security experts bridge the gap between existing management and technical teams to build and strengthen a company's cybersecurity program.

DevSecOps

Tevora's Development and Cloud Security Consultants bring security in line with business objectives and build security into the development life cycle.

TEVORA ™

Virtual CISO

Tevora's top security experts bridge the gap between existing management and technical teams to build and strengthen a company's cybersecurity program. Experienced professionals are available in real-time to:

• Understand the organization's strategy and business environment;

• Provide threat analysis and strategy guidance;

• Anticipate future security and compliance challenges;

• Align security and business objectives; and,

• Create metrics to measure the health of the security program.

DevSecOps

The shift to dynamic provisioning, shared resources and cloud computing has allowed speed and agility in application development. The next step is implementing security into the life cycle. Tevora's Development and Cloud Security Consultants have the experience and resources to:

• Understand the current development life cycle;

• Identify security shortcomings;

• Create a DevSecOps roadmap; and

• Advise on and implement DevSecOps security tools.

Whatever Your Cyber or Infosec Needs... Tevora Has Got Your Back.

Tevora consultants have experience in many parts of what keeps a business going and know how to work with large, varied teams to succeed in difficult and critical projects. Tevora is the team member to get your company's information security program where you want it to be.

Tevora offers a full range of services designed to anticipate and meet the changing needs of your enterprise

Compliance
We assess, audit, and certify compliance across a comprehensive portfolio of cybersecurity standards.

Enterprise Risk Management
We speak the language of cyber risk and translate it into business impact - giving you rich data to make meaningful decisions.

Data Privacy
We help you craft strategies and plans that work; allowing you to meet the growing demands of domestic and international privacy regulations.

Security Solutions
We help you plan, implement, and integrate cybersecurity products that reduce your risk profile: on-prem, mobile, and in the cloud.

Threat Management
We test your systems, processes, and security with a world class team of certified hackers and security researchers.

Incident Response
We are a team of first responders, threat hunters, and incident containment specialists working with the latest tools and techniques; ready to serve when your business needs it most.
