

ENTERPRISE RISK

Business Continuity and Disaster Recovery Services

A Business Continuity Plan (BCP) and Disaster Recovery Plan (DRP) are more than just an exercise in compliance box-checking; they are one of the most valuable tools you can use to ensure the business can maintain operations and grow even when potential disasters strike. ▲

Why is Business Continuity and Disaster Recovery Critical?

What we consider to be normal business operations can quickly be challenged in a digitally connected global economy. The increased uncertainty of weather, pandemics and rise in remote workforces bring new challenges to organizations. Without an understanding of technical needs and dependencies from business units, formalized documentation, training on alternative operations or regular table top simulations, business can halt. This can be avoided by understanding the scenarios that may affect your organization, your industry or your geographic area.

Tevora Helps Keep Your Business Connected & Compliant

BCP & DR Readiness Assessment

Our expert consultants work with your team to identify areas where the organization can improve upon current BCP and DR practices, assess readiness to execute these practices and advise on industry best practices to meet compliance requirements.

Business Impact Assessments

We listen to the needs of the business to identify the critical personnel, facilities, computer systems, operations, and equipment needed to maintain operations, while we create thresholds for prioritization, recovery time objectives, recovery point objectives and coordination efforts to thrive even in a disaster or pandemic.

Table Top Exercises (remote or onsite)

Our team reviews your organization's current policies, procedures, security tools and infrastructure, then builds immersive, custom continuity and disaster simulations based on your specific environment.

Business Impact Analysis (BIA):

A risk-based systematic approach to determine and evaluate the potential effects of an interruption to critical business operations as a result of a disaster, accident or emergency by understanding all dependencies including software, hardware, personnel and locations.

Business Continuity Plan (BCP):

A process to create an ecosystem of prevention and recovery from potential threats to an organization by creating a plan to ensure personnel and assets are protected and are able to maintain operations in the event of an interruption.

Disaster Recovery Plan (DRP):

A set of documented process and procedures to execute, recover and protect an organization's IT infrastructure before, during and after a disaster.

Table Top Exercises:

A set of simulated activities to test the accuracy of the defined BIA, BCP and DRP, while ensuring personnel are aware of their responsibilities for a coordinated response and recovery effort.

Document Best Practices

Our team partners with you to prioritize, develop, document and implement business continuity plans and disaster recovery procedures to address the technology, policy, process, training, and other gaps that you need to close to achieve reliance on systems and consistent business operations. We can assist you no matter what phase you are in: create custom documentation, leverage industry best practices, act as an extension of your team to fill in needed expertise, etc.

Supporting Compliance Objectives

Business continuity and disaster recovery procedures are not just foundational to maintaining business operations, but are also key requirements for many regulatory and compliance areas including:

- PCI DSS
- HIPAA
- SOC 2
- HITRUST
- ISO 27001
- FedRamp
- ISO 27017

Tevora partners with you to understand the critical paths to maintaining effective operations, regardless of the environment, external threats and location of assets and personnel. We do this through interviews, documentation review, asset evaluation, and industry expertise.

Let Tevora be a trusted partner to help you design, document and plan for potential interruptions in normal business operations.

Tevora offers a full range of services designed to anticipate and meet the changing needs of your enterprise.

Compliance

We assess, audit, and certify compliance across a comprehensive portfolio of cybersecurity standards.

Enterprise Risk Management

We speak the language of cyber risk and translate it into business impact - giving you rich data to make meaningful decisions.

Data Privacy

We help you craft strategies and plans that work; allowing you to meet the growing demands of domestic and international privacy regulations.

Security Solutions

We help you plan, implement, and integrate cybersecurity products that reduce your risk profile: on-prem, mobile, and in the cloud.

Threat Management

We test your systems, processes, and security with a world class team of certified hackers and security researchers.

Incident Response

We are a team of first responders, threat hunters, and incident containment specialists working with the latest tools and techniques; ready to serve when your business needs it most.
