

PRIVACY Engineering ▲

Privacy Engineering resides at the core of any privacy program, which relies on technical expertise within both privacy and security.

Tevora understands that a successful privacy program requires different skillsets and partnerships throughout the organization. Drawing from our years of security engineering and architecture, Tevora uses an understanding of an organization's technical capabilities to determine efficient solutions to the issues raised in implementing technical controls to meet the privacy program needs. ▲

Services

Data Mapping and Control Design

Most critical to any privacy program is the understanding of how data is stored. Tevora assists an organization in building out these data mappings to determine where data is, why it is there, how long it has been there and should be there, who its owner is, and how it is protected. Tevora partners with various organizations to build out the process for data mapping and assists in implementation of any automated tools. If an automated tool is not needed, Tevora will build a physical data inventory based on staff interviews and create a runbook for maintaining it.

Privacy Common Control Framework

When creating a privacy common control framework, Tevora identifies all privacy requirements, laws and frameworks, and centralizes them in a single source. Tevora then identifies how the organization meets all controls and how they can be audited.

Procedures and Standards

Tevora assists in formalizing and documenting the policies and procedures for an organization's privacy program, including data subject request management, consent, and acceptable data usage.

TEVORA PRIVACY MODEL

Tevora's skilled consulting team uses its proven three-pronged Tevora Privacy Model to support you in building an effective, comprehensive privacy program.

Privacy Governance

Tevora assists organizations in incorporating governance throughout the lifecycle of the privacy model, starting with creating a well-defined framework, considering critical business operations to monitor, and assessing performance.

Privacy Operations

Tevora partners with in-house teams to operationalize efficiencies for maintaining and executing a privacy program and determining how to best use the existing resources, always keeping the customer experience at the forefront.

Privacy Engineering

Drawing from years of technical expertise within both privacy and security, Tevora works to understand your organization's technical capabilities and determines efficient solutions to implement technical controls that meet your privacy program needs.

Tool Selection and Implementation

Tevora partners with and is knowledgeable about a variety of software companies. We assess the needs of the organization, suggest an appropriate tool, then assist in building out supporting documentation and implementing the tool.

OWASP Top 10 Privacy Risk Assessment

In addition to the PIA (Privacy Impact Assessment), Tevora conducts a security assessment against the OWASP Top 10 Privacy Risk list to determine where, at a more granular and technical level, privacy risk resides. Our team then makes recommendations on how to mitigate those risks.

Let Tevora be your trusted partner to help you create efficient and sustainable solutions to your privacy program needs. Contact us by phone at 833-292-1609 or by email at sales@tevora.com.

Go forward. We've got your back.

We live in a digital world, and your customers trust you to keep their information safe. We make it our responsibility to equip you with the information, tools, and guidance you need to stay out of the headlines and get back to business.

Tevora offers a full range of services designed to anticipate and meet the changing needs of your enterprise

Compliance

We assess, audit, and certify compliance across a comprehensive portfolio of cybersecurity standards.

Enterprise Risk Management

We speak the language of cyber risk and translate it into business impact - giving you rich data to make meaningful decisions.

Data Privacy

We help you craft strategies and plans that work; allowing you to meet the growing demands of domestic and international privacy regulations.

Security Solutions and Cloud Services

We help you plan, implement, and integrate cybersecurity products that reduce your risk profile: on-prem, mobile, and in the cloud.

Threat Management

We test your systems, processes, and security with a world class team of certified hackers and security researchers.

Incident Response

We are a team of first responders, threat hunters, and incident containment specialists working with the latest tools and techniques; ready to serve when your business needs it most.
