Okta Management Tool

Okta Management Tool Protects and Enhances Your Okta SSO

Organizations rely on and trust Okta SSO for its administrative simplicity and rock-solid security compliance features. But the manual process of changing configurations and test integrations, or recovering from errors and issues, can result in problems that put business continuity at risk.

Tevora’s Okta Management Tool augments Okta with automated features that allow you to initiate backups as needed or per schedule, migrate between tenants for testing and deployments, and restore backups in emergencies. Our tool gives you confidence that these complex functions will be executed without a hitch, avoiding any risks to business continuity.

Protect Your Organization

Backing up your identity and access management system is every bit as important as backing up your databases and other information resources. With Okta Management Tool, you can rest assured that this valuable information is being backed up thoroughly and accurately. And when unavoidable errors and bugs are found in your production environment, our tool ensures that the correct information can be quickly restored.

Okta Backup

The Add-On You’ve Been Missing

Scheduled Backups
Ensure you have the latest, known-good configuration at all times.

Sandbox Seeding
Easily mirror configurations between production and test tenants.

Granular Restoration
Restore some or all users, groups, applications, and/or settings from backups.
Reduce Change Risk and Improve Compliance with Okta Management Tool

Identify and resolve conflicts and changes to your environment

Granular configurations to backup, restore, or migrate
