Cyber Insurance and Incident Response Services

As the number of cyberattacks continues to surge, cyber insurance providers need a partner with deep cybersecurity experience to help their insured clients detect and respond to attacks. Tevora's Incident Response Team is uniquely qualified to be that partner. We have extensive experience collaborating with cyber insurance carriers, insured clients, breach counsel, and government agencies to minimize reputational and financial damage when attacks occur.

Proactive Services

We work with each client to check and double-check that their defensive strategy is ready for imminent threats.

Insurance Readiness & Renewal Assessment

An in-depth analysis to assess organizations looking to acquire cyber insurance or assist those with existing policies and how well they have mitigated risk. A full review of network infrastructure, security controls, policies, procedures, and IR plans are conducted. Any areas of improvement are documented and provided to the client.

Compromise Assessments

A threat hunting exercise reviews an organization's environment for any active or evidence of past threats. Tevora will perform a comprehensive survey of the environment and look for any suspicious or malicious activity.

Tabletop Exercises

We build interactive, real-world cyberattack simulations to test an organization's incident response plan, disaster recovery and business continuity plans, and ability to combat ransomware, phishing, and more.

Ransomware Readiness Assessments

Tevora's experts improve response techniques, ensuring you are ready to respond quickly and effectively to minimize potential impacts.

Reactive Services

We combat attackers head on and work with clients to eradicate threat actors and stop them in their tracks.

Emergency Incident Response Support

Available 24/7, we help insured clients quickly identify and eradicate threats. Throughout the incident response lifecycle, we will provide guidance and incident management to quickly isolate and eliminate any identified threats.

Digital Forensic Investigations

We handle investigations ranging from insider threats, HR violations, money laundering, bank robberies, and PFI engagements.

As one of 21 PCI Forensic Investigator firms (PFIs) in the world, we are qualified to carry out investigations related to data infringement and data compromise in the Payment Card Industry (PCI) networks.

Remediation Support Services

We provide hands-on expertise to implement remediation recommendations and guidance to help clients return to normal operations. These services minimize the risk of future compromise and leverage best practices and lessons-learned from the breach.

Your Trusted Partner

If you'd like to learn more about Tevora's Insurance Breach Response Services, contact us by phone at **877-200-4010** or by email at **ir@tevora.com**.

Go forward. We've got your back.
