Solution Implementation Services

Getting the right technology stack is often the most visible function of senior security managers and it's not an easy task. Fortunately, Tevora's team of experienced implementation specialists can partner with you every step of the way to deliver leading-edge security solutions that bring your organization to the next level.

Tailored to Your Environment and Needs

We take the time to get to know your team, environment, and requirements in depth to ensure our security solutions are perfectly matched to your organization.

Tevora is your technology partner for success. Whether your security program has a firm heading and you need more hands to make it happen, you need help building the vision and finding the right course, or somewhere in between, Tevora has the experience to achieve your objectives.

What Are the Benefits of Using Tevora's Implementation Services?

Expertise. Our expertise runs deep. We bring comprehensive security knowledge of everything from Identity Access Management to Zero Trust to Infrastructure as Code. An experienced project manager is engaged from the beginning to help shepherd each implementation project through to successful completion.

Experience. Many of the world's leading companies turn to Tevora to fortify their defenses. You bring lessons learned and proven methodologies developed implementing security solutions for those organizations.

Dedication. Our experts get down in the trenches with you, working hand-in-hand with your team to ensure successful implementation of your security solutions.

Tevora's Approach for
Implementation

1 Assess
Conduct a discovery assessment to gain understanding of your organization's unique business and technology needs.

2 Plan
Based on the assessment, we create a detailed project roadmap that:

- Defines how the solutions addresses specific business and security needs.
- Establishes project priorities and identifies potential pitfalls.
- Outlines the project timeline.
- Details how the solutions will be managed and maintained following implementation.

3 Build
Deployment of the security solutions according to approved plan. Tevora's project management office ensures:

- A robust implementation process.
- Accurate project tracking.
- Regular reporting to stakeholders.

4 Run
We prepare teams running these solutions that they are able to execute effectively, ensuring that these new solutions don't become the next generation of "shelfware".

- Training of critical personnel.
- Documentation of SOP for daily operation.
- Creation of process auditing and reporting functions.

Go forward. We've got your back.

We live in a digital world, and your customers trust you to keep their information safe. We make it our responsibility to equip you with the information, tools, and guidance you need to stay out of the headlines [and get back to business].

Eyes on the future.

Tevora takes a long-term outlook and proactive approach to every engagement. We combine our technical knowledge with practical business acumen to produce and execute strategies that fortify your organization's assets and build a foundation for the future.

Audit Standards

Our MBAs and CISSPs can help your organization assess and test against PCI DSS, PA-DSS, SSF, HITRUST, ISO 27001, STAR, SOC I, SOC II, MPAA and more.
