- Vulnerability Management
- Continuous Threat Exposure Management (CTEM)
- Business Continuity/Disaster Readiness

Penetration Testing

- External Penetration Testing
- Internal Penetration Testing
- Web Application Testing
- AI Red Teaming

Why SLED Organizations Choose Tevora

SLED organizations operate in a high-stakes environment where public trust, critical services, student and citizen data, limited resources, and evolving compliance expectations all intersect. Tevora helps these organizations move beyond reactive security by bringing deep expertise in NIST-based cybersecurity programs, CREST-certified penetration testing, and public sector security strategy. With experience supporting K-12, higher education, government agencies, and public sector environments, our consultants help strengthen cloud, infrastructure, application, and governance security—building practical, sustainable programs that improve resilience and protect the communities these organizations serve.

Tevora is an approved vendor for cybersecurity services to public agencies, as part of a cooperative agreement available to public sector agencies through the General Services Administration.

What this means for you:

- Tevora has been pre-vetted by the General Services Administration. You will have access to pre-negotiated rates, obtained through a competitive bid with other leading cybersecurity consultancies from across the country. You are benefiting from competitive pricing, typically unavailable to individual agencies.
- Tevora's services have been deemed as the best fit for public agencies for cybersecurity. Tevora competed against strict guidelines and principles to ensure quality and efficiency.
- Save time when you circumvent the lengthy RFP process. Because Tevora is an approved vendor, you may vet Tevora for your agency's specific needs without triggering the need for an RFP.

Founded in 2003, Tevora is a specialized management consultancy focused on cybersecurity, risk, and compliance services. Based in Irvine, CA, our experienced consultants are devoted to supporting the CISO in protecting their organization's organizations, people, and assets. We make it our responsibility to ensure the CISO has the tools and guidance they need to build their departments, so they can prevent and respond to daily threats.

Our expert advisors take the time to learn about each organization's unique pressures and challenges, so we can help identify and execute the best solutions for each case. We take a hands-on approach to each new partnership, and—year after year—apply our cumulative learnings to continually strengthen the company's digital defenses.
